*This project was a complete remodel of the Maternity Department and was required to be completed while remaining open with all the services available to patients and doctors. This was completed in three phases over a five month time period.*

*Much of the medical gases, electrical equipment, lighting and operating casework was replaced with state of the art equipment. Isolation of the construction area was required due to adjacent rooms*

Document posted on the left wall.

Medical supplies on the countertop, including a coffee maker and blue storage bins.

Medical supplies hanging on the wall, including a stethoscope and boxes.

Medical equipment on the right side of the room, including a monitor and a cart.
